PROFESSIONAL SUMMARY

Financial-domain software engineer with 5+ years at Deloitte and Accenture, building highly-reliable, compliance-grade enterprise systems for financial services clients. Deep expertise in distributed financial data systems with exactly-once transaction semantics, SEC/FINRA-aligned audit trails, and defence-in-depth security. Proven track record of delivering measurable client impact: 70% error reduction in payment systems, 99.9%+ uptime, and zero security incidents. Experience in AI/ML automation directly aligned with Schwab's Intelligent Portfolios and fraud detection roadmap.

TECHNICAL SKILLS

Languages: Java, C#/.NET Core, Python, JavaScript/TypeScript, SQL

Frameworks: Spring Boot, ASP.NET Web API, React, Angular, Node.js, xUnit, NUnit

Cloud & Infrastructure: AWS (EC2, S3, Lambda, SQS, RDS), Azure (AKS, App Service), Kubernetes, Docker, CI/CD

Data & Messaging: PostgreSQL, Oracle, Redis, Apache Kafka, Elasticsearch, OpenTelemetry

Financial Systems: Event Sourcing, CQRS, Transactional Outbox, Idempotency Keys, Exactly-Once Semantics

AI & Automation: LangGraph, Multi-Agent Orchestration, Python AI Pipelines, pgvector, Fraud Detection Patterns

Security & Compliance: AES-256/TLS 1.3, OAuth2/JWT, MFA, OWASP, RBAC, Zero-Trust, SOX/FINRA-aligned Audit Trails

EXPERIENCE

Deloitte

Consultant

Hyderabad

June 2025 – Present

- Eliminated a systemic payment API failure pattern causing 4,000+ failed client transactions per day — end-to-end ownership from root cause (race condition resolved with Redis distributed locking) through deployment and 48-hour post-release monitoring, reducing error rate from 2% to under 0.1%.
- Optimized financial data query performance by 25% through SQL tuning and Entity Framework refactoring, cutting client-facing transaction latency by 800ms at peak load — directly improving response times for 50,000+ daily users.
- Implemented defence-in-depth security controls aligned with financial services regulatory standards — AES-256 encryption at rest, TLS 1.3 in transit, OAuth2/JWT with MFA, RBAC Kubernetes network policies, and OWASP-compliant automated vulnerability scanning in CI/CD — reducing vulnerability exposure by 40% and achieving zero security incidents.
- Replaced a legacy logging mechanism with a custom OpenTelemetry structured audit logger producing immutable, tamper-evident transaction records — reducing mean-time-to-detect anomalies by 60% and enabling compliance-grade audit trails for financial operations.
- Achieved 95% code coverage through comprehensive unit, integration, and end-to-end tests — implementing chaos engineering and failure injection to proactively identify failure modes before they reached production or impacted clients.
- Pioneered an LLM-driven agentic code review pipeline using Python and LangGraph — automatically flagging structural risks and compliance violations within CI/CD workflows — reducing architectural regressions by 35% and aligning with Schwab's AI-powered compliance automation roadmap.
- Designed and deployed an Agentic AI test orchestration system that synthesizes unit test suites and edge-case payloads from code diffs, reducing manual test authorship by 40% while maintaining compliance standards for financial-grade code.
- Accelerated enterprise CI/CD pipeline by authoring Kubernetes deployment manifests with RBAC isolation, reducing deployment cycle time from 45 minutes to under 8 minutes — enabling reliable, frequent delivery of client-facing features.

Accenture

Full Stack Engineering Senior Analyst

Hyderabad

March 2022 – June 2025

- Maintained 99.9% production uptime for enterprise systems serving 100,000+ concurrent users, resolving 300+ high-priority defects with zero security incidents — treating every outage as a direct client impact, not an abstract engineering metric.

- Delivered 100+ end-to-end features for 200,000+ enterprise end users, accelerating product roadmap velocity by 25% while maintaining compliance standards and SLA commitments.
- Proactively identified a PII data exposure risk in a proposed caching architecture, escalated with a formal risk assessment documenting the regulatory implications, and implemented a compliant alternative that passed the security audit with zero findings.
- Led a full WCAG 2.1 accessibility audit and remediation for financial software — remediating 47 issues, achieving 100% compliance, and embedding accessibility checks into the PR pipeline — expanding the accessible client base and meeting ADA compliance requirements.
- Invested in team capability: mentored 5 junior engineers through structured pairing and architecture reviews — 2 promoted to senior roles within 18 months — raising the team's overall code quality and reducing post-release defect rates by 15%.
- Led RFC and technical steering across 4 cross-functional teams, cutting feature design phases by 20% through proactive stakeholder alignment and transparent risk communication.

Accenture

Bengaluru

Full Stack Engineering Analyst

September 2020 – March 2022

- Reduced cross-device rendering latency by 20% and improved mobile user retention by 15% by designing scalable Angular (v8+) and TypeScript front-end architectures for 50,000+ users.
- Accelerated page load speeds by 35% and reduced data synchronization latency by 30% through front-end optimizations and high-throughput RESTful API integrations.
- Achieved 100% WCAG accessibility compliance and 95% automated test coverage, eliminating production regressions and meeting financial services accessibility standards.

PROJECTS

Distributed Financial Ledger (Trading System Architecture) | *Java, Kafka, Redis, PostgreSQL, Kubernetes, AWS*

- Architected a fault-tolerant financial transaction ledger using Kafka and CQRS/Event Sourcing patterns, processing 20,000+ concurrent transactions per second with guaranteed exactly-once settlement semantics — the same architectural pattern as modern trade execution systems.
- Implemented idempotency keys and Transactional Outbox pattern using Redis distributed locking (Redlock algorithm), eliminating double-processing risk across failure scenarios — critical for financial transaction correctness.
- Guaranteed 99.99% data consistency and regulatory-grade auditability by persisting immutable event streams in Kafka, enabling deterministic state reconstruction and compliance-grade audit trails aligned with SEC Rule 17a-4 record-keeping requirements.
- Designed exactly-once semantics with full crash recovery: on restart, the system replays from the last committed event without lost or duplicate transactions.

Agentic AI Financial Compliance Guardrail Engine | *Python, LangGraph, pgvector, Kafka, Azure* March 2026 – May 2026

- Engineered an autonomous multi-agent compliance pipeline using Python and LangGraph — aligned with Schwab's AI fraud detection and regulatory compliance automation roadmap — achieving 94% accuracy in financial document classification and reducing manual review time by 35%.
- Built human-in-the-loop escalation with full immutable audit trail of every AI decision — ensuring regulatory-grade accountability and enabling compliance teams to audit every autonomous action, analogous to Schwab's FINRA reporting requirements.
- Reduced LLM inferencing cost by 30% through Redis semantic caching, making the system cost-effective at enterprise financial scale.

Resilient Financial API Gateway | *C#/.NET Core, Redis, Docker, Kubernetes, AWS* May 2026 – Present

- Designed a high-availability API Gateway using Strangler Fig and Aggregation patterns for zero-downtime migration of legacy financial endpoints to microservices — the same pattern required for Schwab's TD Ameritrade platform integration.
- Implemented per-client rate limiting (token bucket, Redis), Circuit Breaker, and stale-cache graceful degradation — protecting downstream financial services under load and meeting 99.9% SLA commitments during backend outages.

EDUCATION

Karunya University

Bachelor of Technology in Computer Science and Engineering

Coimbatore, Tamilnadu

2020

CERTIFICATIONS

- AZ-900: Microsoft Azure Fundamentals
- AI-900: Microsoft Azure AI Fundamentals

ACCOMPLISHMENTS

- ACE'22 Performer of the Year Award — Accenture
- ACE'23 Extra Mile Award for Offshore Individual — Accenture
- FY26 Applause Award — Deloitte
